Background

MDACC Cervical Cancer Definitive Treatment: Timeframe & Data Collection

- Many different ongoing translational projects
- **Needs:** Refined prognostication, Assessing treatment response, Surveillance
- **Today's focus:** Describing changes in HPV cell-free DNA during/after treatment

Background

cfDNA = cell-free DNA

ctDNA = circulating tumor DNA

HPV cfDNA \approx ctDNA

ddPCR Assay

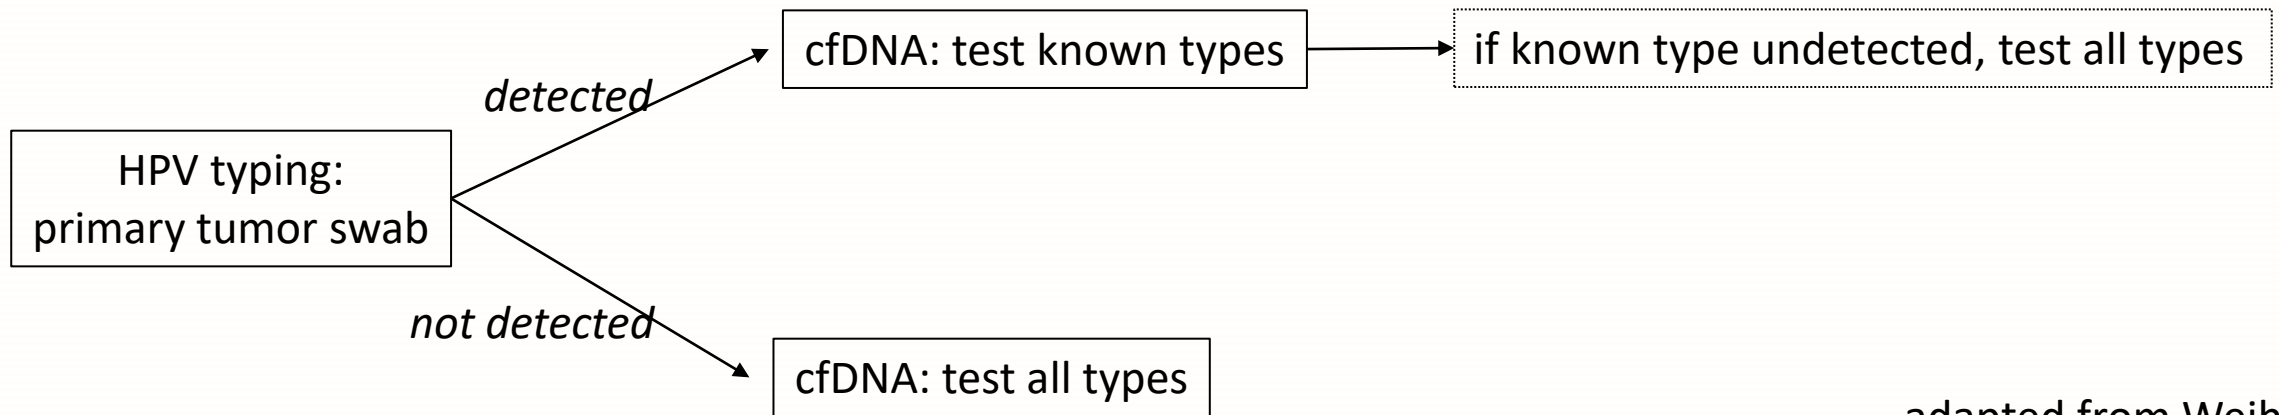

Gillison Lab

13 HPV types tested:
16, 18, 31, 33, 35, 39, 45,
51, 52, 56, 58, 59, 68

Limit of Detection
(LoD): 16 copies/mL

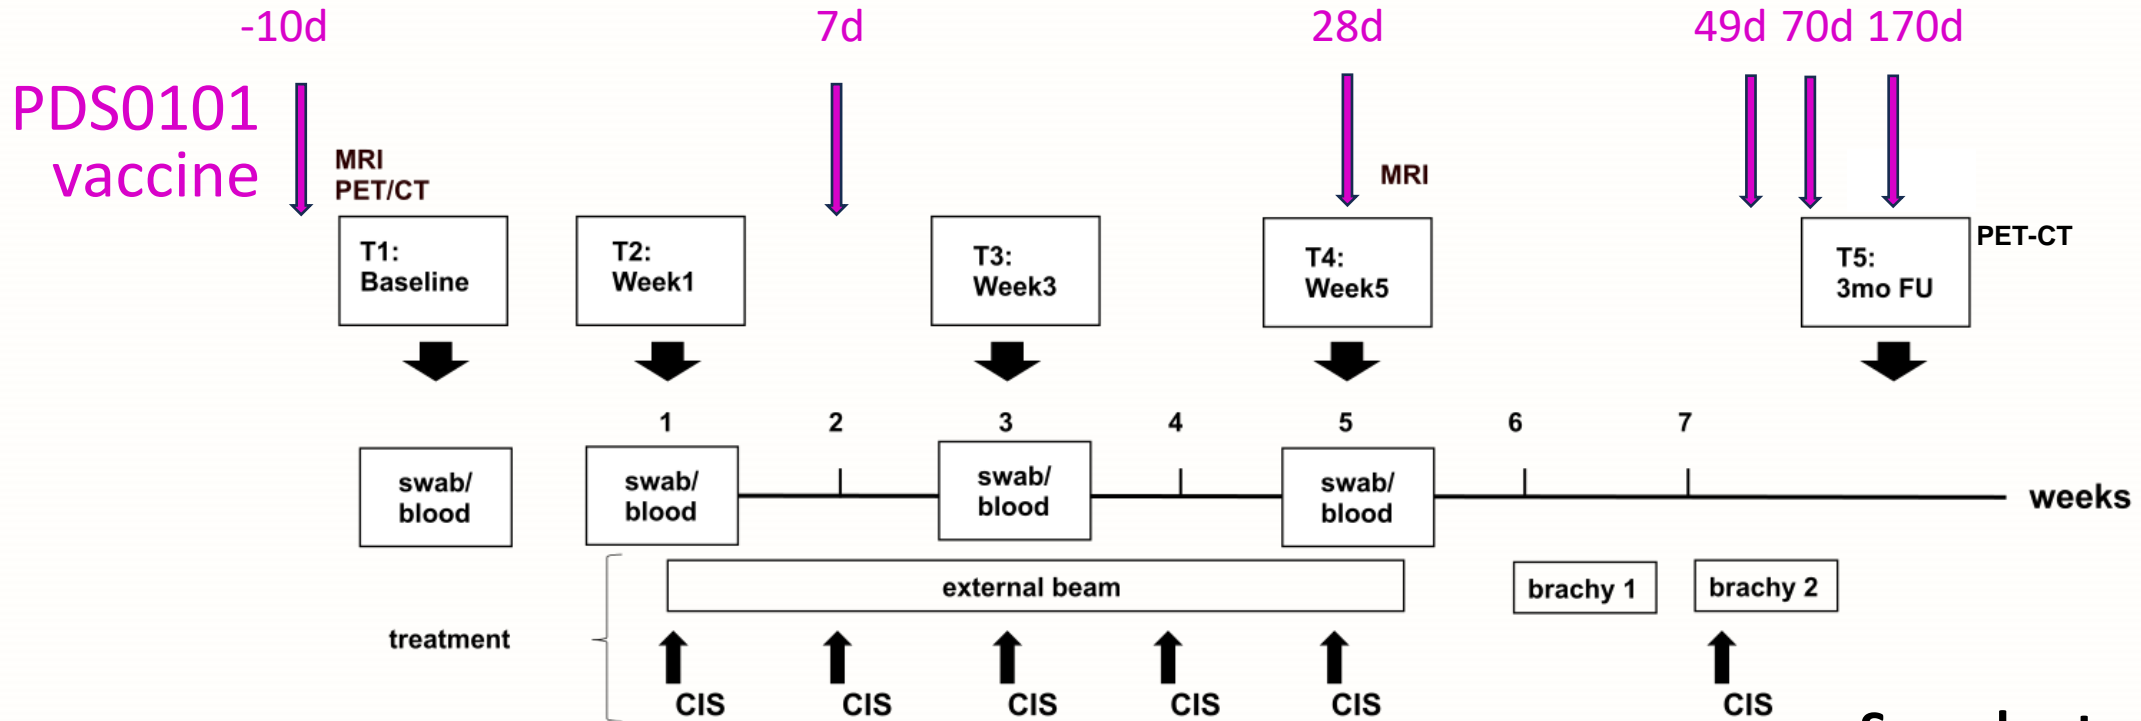

Bio-Rad QX200 droplet digital PCR system

Lambrescu *Int. J. Mol. Sci.* 2022

Cohorts: SOC vs PDS0101

Samples tested for cfDNA?

SOC: Standard-of-care

44 pts

PDS0101: Phase IIA IMMUNOCERV trial PDS0101 therapeutic vaccine (HPV-16 E6/E7 antigen), *ongoing*

17 pts

61 total

Cohort Characteristics

Characteristic	SOC	PDS0101	P-value
Age (yrs;mean)	43.9	44.1	0.96
BMI (kg/m²;mean)	29.6	26.7	0.04
Ethnicity, n(%)			0.18
Hispanic/Latino	13(30%)	2(12%)	
Not Hispanic/Latino	30(68%)	14(82%)	
Declined to answer	1(2%)	1(6%)	
Smoking Status			0.71
Current	6(14%)	2(12%)	
Former	10(23%)	6(35%)	
Never	26(59%)	9(53%)	
Unknown	2(4%)	0(0%)	

Characteristic	SOC	PDS0101	P-value
FIGO 2018 Stage			0.80
I	3(7%)	1(6%)	
II	8(19%)	2(12%)	
III	29(69%)	12(71%)	
IV	2(5%)	2(12%)	
Nodal Involvement			0.02
Yes	31(70%)	17(100%)	
No	11(25%)	0(0%)	
Unknown	2(5%)	0(0%)	
Highest Involved Node			0.14
Para-Aortic	9(29%)	2(12%)	
Common Iliac	8(26%)	2(12%)	
Other Pelvic	14(45%)	13(76%)	

Difference in % nodal involvement (greater in PDS0101)

HPV Types: Tumor & cfDNA

HPV types detected in tumor

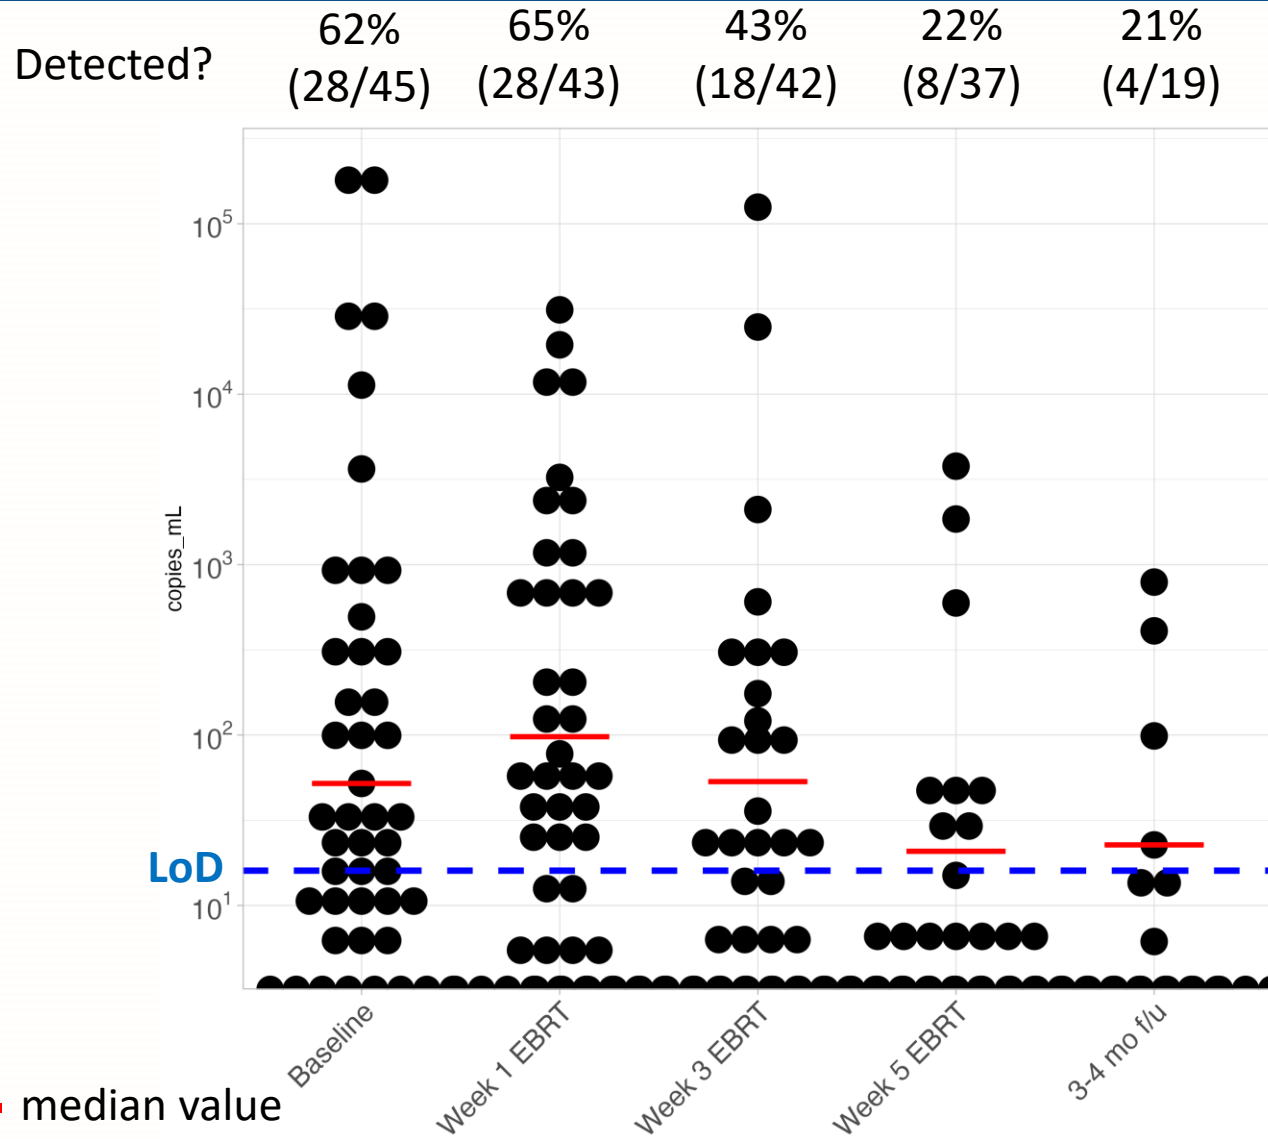

- HPV-16+: 59% (27/46) of pts
- HPV-negative: 11% (5/46) of pts

HPV types detected in cfDNA

- HPV-16 detected in 70% (43/61) of pts (74% of pts w/ HPV type+)
- No HPV cfDNA detected in 5% (3/61) of pts

HPV cfDNA Distribution During and After RT

Cohorts Pooled

Timepoint	Median (copies/mL)	Range
Before EBRT (T1)	28.15	0 - 206,030
Week 1 EBRT (T2)	48.92	0 - 31,255
Week 3 EBRT (T3)	7.06	0 - 125,155
Week 5 EBRT (T4)	0	0 - 3780
3-4 mo f/u (T5)	0	0 - 789

- HPV cfDNA detection changes over time
- Wide range of HPV cfDNA levels

LoD: limit of detection **EBRT:** external beam radiotherapy

Peak Timepoints

at least 3 measurements

non-shedder
Before PDS0101
Before EBRT
Week 1 EBRT
Week 3 EBRT
Week 5 EBRT
3-4 mo f/u

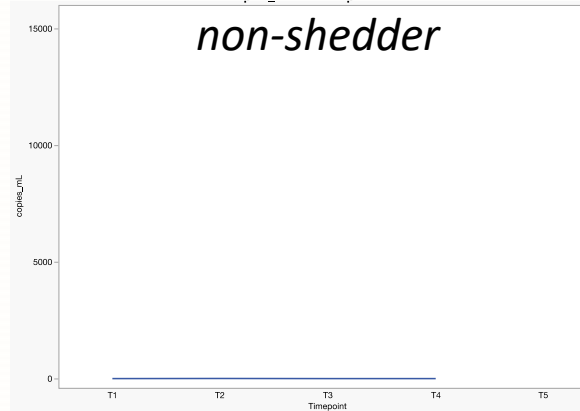

53% of pts peak during week 1 of EBRT

cfDNA during and after RT

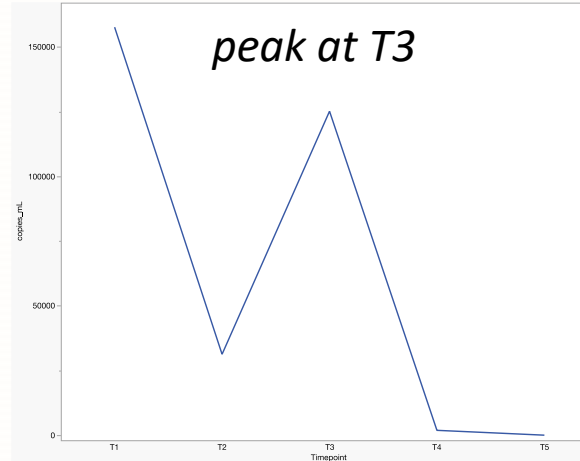

Patient vs. Timepoint

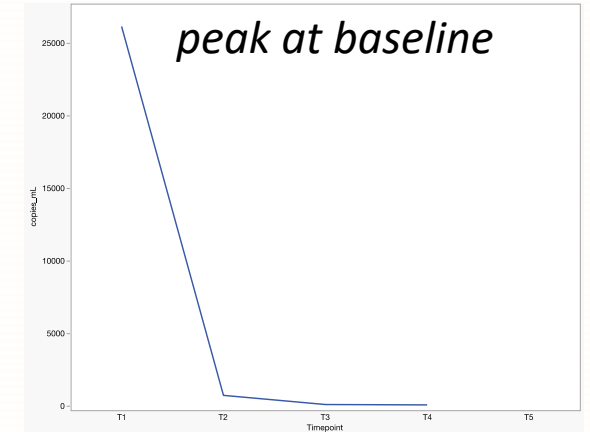

SOC 1047

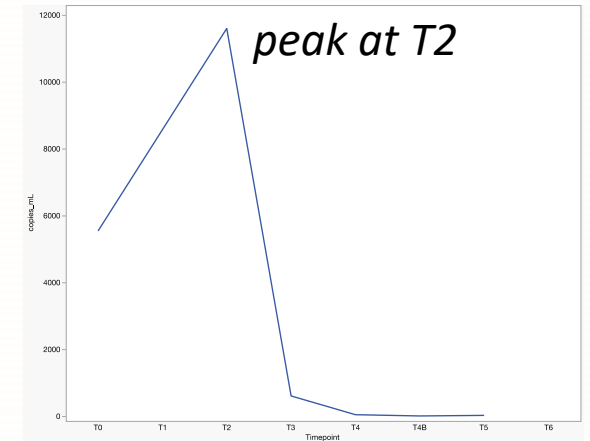

SOC 333

SOC 399

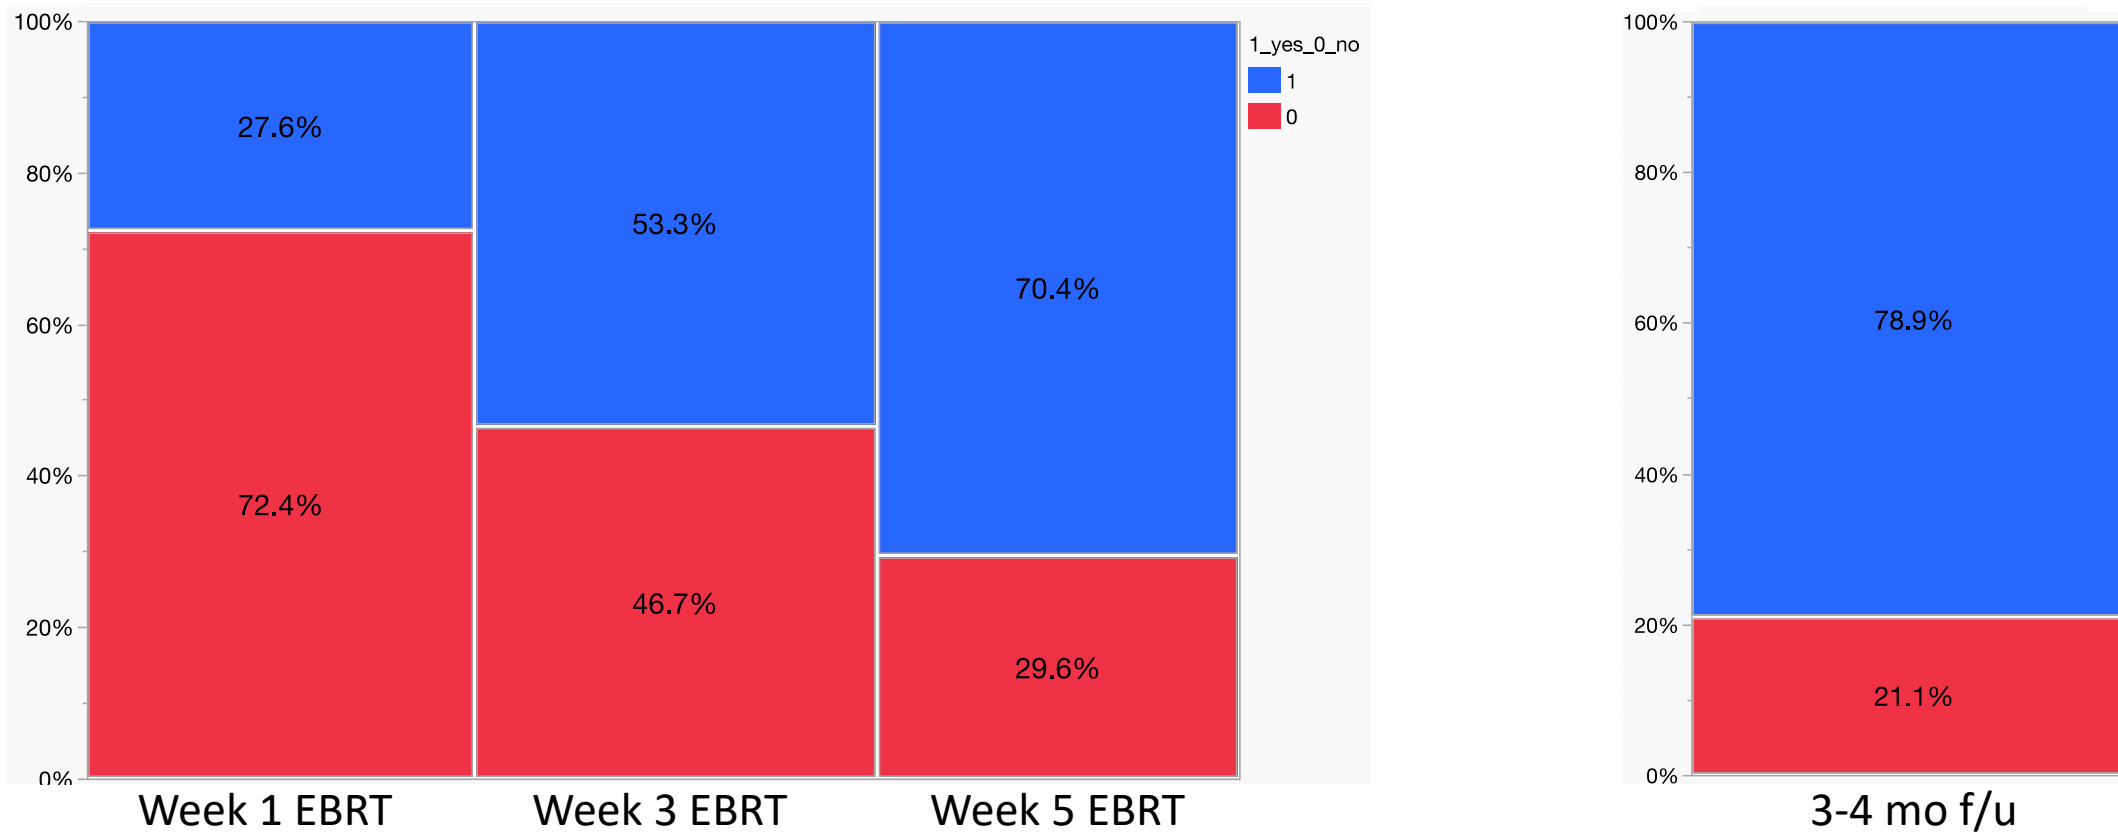

PDS0101-14

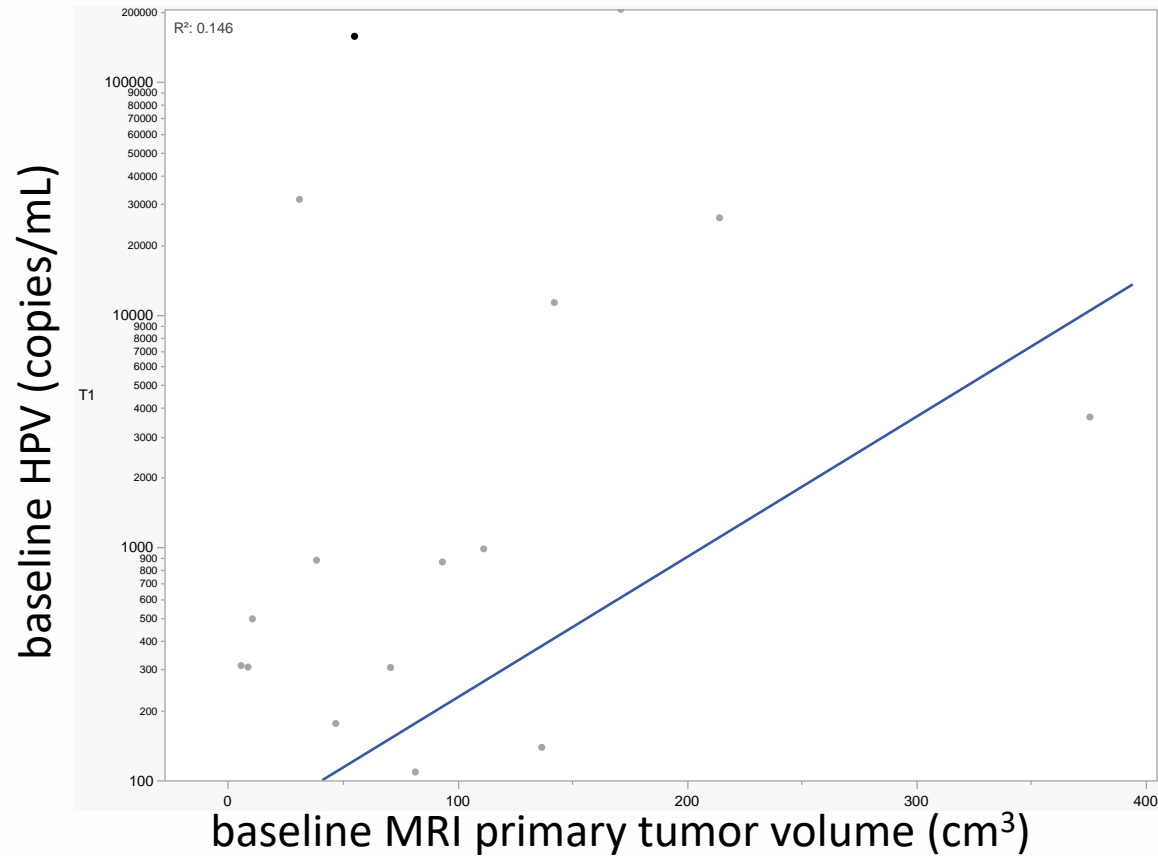

- Many cfDNA level trajectories
- Possible: Undetected at baseline → Detected later
- Pts w/ higher baseline levels: may take longer to clear

cfDNA clearance during and after EBRT

- HPV cfDNA clearance progressively increases throughout EBRT
- 70.4% of pts cleared during week 5 of EBRT; 78.9% at 3-4 mo f/u

Baseline cfDNA & Tumor Volume

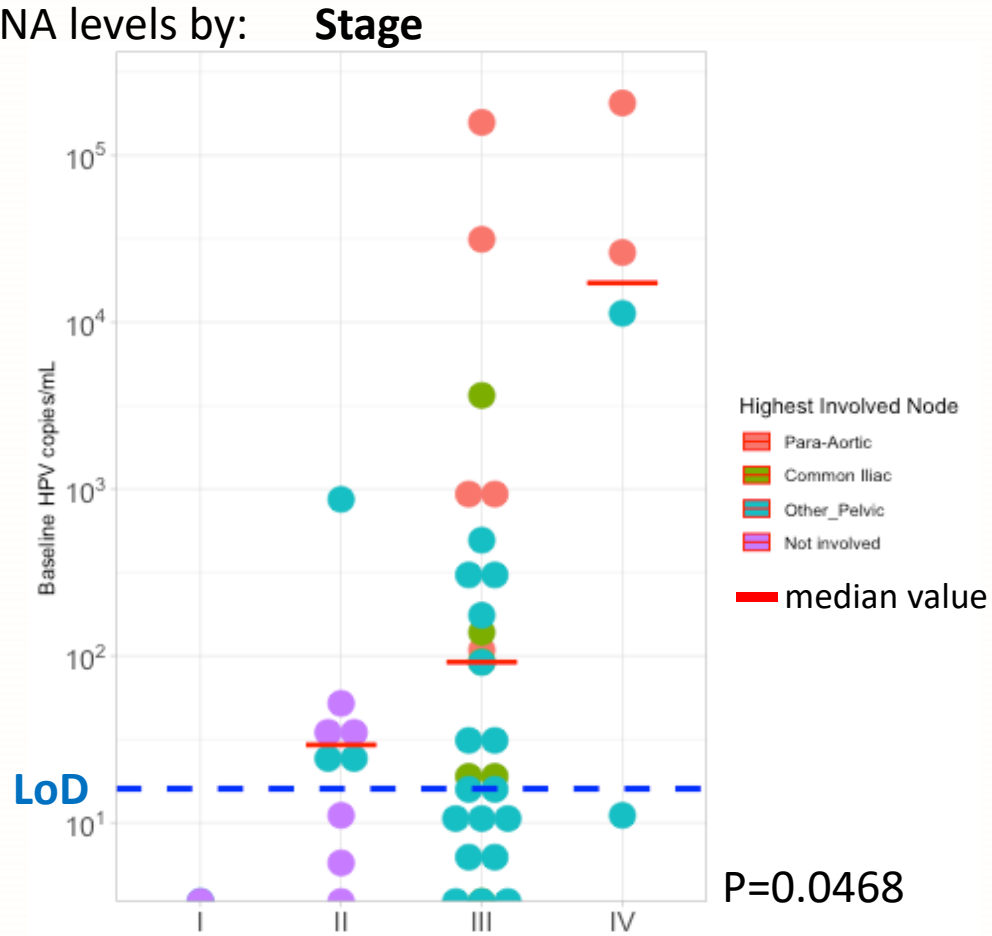

$\rho = 0.249$
 $p = 0.103$

No clear association between baseline HPV cfDNA level and primary tumor volume

Baseline cfDNA & FIGO Stage, Nodal Involvement

Baseline HPV cfDNA levels by:

HPV cfDNA level associated with FIGO 2018 Stage

Highest Involved Node

HPV cfDNA level associated with para-aortic nodal involvement

Clearance at Timepoint & Recurrence-Free Survival (RFS)

During Week 1 EBRT

During Week 3 EBRT

During Week 5 EBRT

3-4 mo f/u

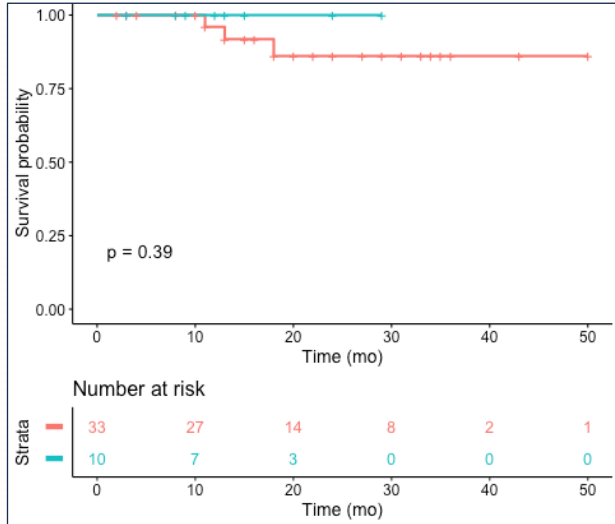

Strata + Not cleared + Cleared

pooled median f/u: 24 mo

- Early analysis: no clear association b/w timing of HPV cfDNA clearance during EBRT & RFS
- Limited # of “HPV cfDNA not cleared” f/u samples, but these pts potentially have worse RFS

Clearance at Timepoint & Overall Survival

During Week 1 EBRT

During Week 3 EBRT

During Week 5 EBRT

3-4 mo f/u

pooled median f/u: 26 mo

Strata — Not cleared — Cleared

Similar story to RFS: no clear associations in early analysis, will need longer f/u data

PDS0101 vs SOC: cfDNA Clearance Timepoints

Earlier and greater proportion of cfDNA clearance in **PDS0101** compared to SOC

Conclusions

- Tumor HPV- \neq cfDNA HPV-
- Wide range of HPV cfDNA levels
- HPV cfDNA levels generally peak during EBRT, and many pts clear HPV cfDNA by end of EBRT
- HPV cfDNA levels associated w/ stage & nodal level involvement
- No clear associations with survival outcomes in early analysis

Future Directions, Considerations

- Continue sample collection, data analysis
- Compare with additional imaging & molecular correlative data
- Role for poor ctDNA clearance or f/u ctDNA detectability to guide "outback" chemo?
